

# AeroCare II Piston Nebulizer

Nebulizer is a device used to administer medication to people in forms of a liquid mist to the airways. It is thus used in treating respiratory diseases. Piston type Nebulizers pump air through a liquid medicine to turn into a vapor, which is then inhaled by the patient.

These medicines are frequently steroids, and the reason they are inhaled instead of digested is to limit their effect to the lungs / respiratory system only. Otherwise, that amount of steroid saturated throughout the body would be toxic.

Hikoneb AeroCare II piston Type Nebulizer is designed to be used on living environment of the patient. AeroCare unit is perfect for daily usage of a single patient. Aerrocare II is a low cost high quality alternative to the expensive nebulizers in the market. It has 3.5 Bar pressure output.

## Main Areas of Usage

- Drug Nebulization
- Specific - Non specific lung diseases
- Bronchial Asthma
- Pneumonias
- Acute and Non-acute bronchial

## Technical Specifications

Voltage  
230 V / AC

Frequency  
50 Hz

Power  
70 Watt

Max. Compressor

Pressure  
3.5 Bar

51.45 psi

Airflow  
9.5 Liter/Min

Net Weight  
1.75 Kg

Dimensions  
250 x 165 x 110 mm

Class  
II

Type  
B
